

Beginner - Data Comparison Tool

Data Comparison Tool

The data comparison tool can be located by using the link found under **Applications**.

This feature helps users easily compare two records within the project. Users will select the desired records and hit **Compare**.

The screenshot shows the interface for comparing two records. It features two dropdown menus for selecting record IDs, with '112' and '147' selected. To the right of these menus is a button labeled 'Compare', which is highlighted with a red rectangular box.

REDCap will create a table showing any differences in the data input into the records, broken down by the field's label and its associated form. Fields without data stored are included in the comparison.

Label (field name)	Form Name	Record ID	
		112	147
Age (years) (<i>age</i>)	Demographics	82	
Race (<i>race</i>)	Demographics	American Indian/Alaska Native (<i>AI</i>)	Asian (<i>A</i>)
Height (cm) (<i>height</i>)	Demographics	202	142
Weight (kilograms) (<i>weight</i>)	Demographics	47	83
Complete? (<i>demographics_complete</i>)	Demographics	Complete (2)	Incomplete (0)

Users can click on the data points (in red) to go to the forms and update the values.
